Data

SDS-PAGE analysis of Human MKI67 proteins, 2µg/lane of Recombinant Human MKI67 proteins was resolved with SDS-PAGE under reducing conditions, showing bands at 14 KD.

Background

Prevents chromosomes from collapsing into a single chromatin mass by forming a steric and electrostatic charge barrier: the protein has a high net electrical charge and acts as a surfactant, dispersing chromosomes and enabling independent chromosome motility (PubMed:27362226)
