Shipping	The product is shipped with ice pack,upon receipt,store it immediately at the temperature recommended.

Background

TCP1 epsilon is a member of the chaperonin containing TCP1 complex (CCT), also known as the TCP1 ring complex (TRiC). This complex consists of two identical stacked rings, each containing eight different proteins. Unfolded polypeptides enter the central cavity of the complex and are folded in an ATP dependent manner. The complex folds various proteins, including actin and tubulin.
