## Recombinant Pancreasin/Marapsin/PRSS27 Monoclonal Antibody

catalog number: AN300100P

Note: Centrifuge before opening to ensure complete recovery of vial contents.

т.		crip			7.0

Reactivity Human

Immunogen Recombinant Human Pancreasin / Marapsin / PRSS27 protein

HostRabbitIsotypeIgGClone11G3PurificationProtein A

**Buffer** 0.2 μm filtered solution in PBS

**Applications** Recommended Dilution

**WB** 1:500-1:2000

**IP** 4-6  $\mu$ L/mg of lysate

## **Preparation & Storage**

Storage This antibody can be stored at 2°C-8°C for one month without detectable loss of

activity. Antibody products are stable for twelve months from date of receipt when stored at -20°C to -80°C. Preservative-Free. Avoid repeated freeze-thaw cycles.

Shipping Ice bag

## Background

The name "Pancreasin" because it is transcribed strongly in the pancreas. This secreted, tryptic serine protease, also known as Marapsin or PRSS27 (Protease, serine, 27), is a member of the peptidase S1 family. Pancreasin is inhibited by benzamidine and leupeptin but resists several classic inhibitors of trypsin. Marapsin was constitutively expressed in nonkeratinizing stratified squamous epithelia of human esophagus, tonsil, cervix, larynx, and cornea. In fact, marapsin was the second most strongly up-regulated protease in psoriatic lesions, where expression was localized to the upper region of the hyperplastic epidermis. Similarly, in the hyperproliferative epithelium of regenerating murine skin wounds, marapsin localized to the suprabasal layers, where keratinocytes undergo squamous differentiation. Marapsin's restricted expression, localization, and cytokine-inducible expression suggest a role in the terminal differentiation of keratinocytes in hyperproliferating squamous epithelia.
