### Background

The protein encoded by this gene is a scaffolding subunit of the ATAC complex, which is a complex with acetyltransferase activity on histones H3 and H4. Alternative splicing results in multiple transcript variants encoding different isoforms. YEATS2 (YEATS Domain Containing 2) is a Protein Coding gene. Among its related pathways are Chromatin organization. GO annotations related to this gene include TBP-class protein binding. An important paralog of this gene is YEATS4.
