## Recombinant Mouse Cd80 Protein(FC Tag)

Catalog Number: PDMM100052

Note: Centrifuge before opening to ensure complete recovery of vial contents.

#### Description

**Species** Mouse

Source Mammalian-derived Mouse CD80/B7-1 proteins Val38-Asn246, with an C-terminal Fc

 Calculated MW
 47.9 kDa

 Observed MW
 60-80 kDa

 Accession
 Q00609-1

**Bio-activity** Not validated for activity

### **Properties**

**Purity** > 90% as determined by reducing SDS-PAGE.

**Endotoxin** < 1.0 EU/mg of the protein as determined by the LAL method

Storage Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80

°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of

reconstituted samples are stable at < -20°C for 3 months.

ShippingThis product is provided as lyophilized powder which is shipped with ice packs.FormulationLyophilized from a 0.2 μm filtered solution in PBS with 5% Trehalose and 5%

Mannitol.

**Reconstitution** It is recommended that sterile water be added to the vial to prepare a stock solution of

0.5 mg/mL. Concentration is measured by UV-Vis.

## Data

SDS-PAGE analysis of Mouse CD80/B7-1 proteins, 2 µg/lane of Recombinant Mouse CD80/B7-1 proteins was resolved with an SDS-PAGE under reducing conditions, showing bands at 47.9 KD

### Background

A Reliable Research Partner in Life Science and Medicine

The B-lymphocyte activation antigen B7-1 (referred to as B7), also known as CD80, is a member of cell surface immunoglobulin superfamily and is expressed on the surface of antigen-presenting cells including activated B cells, macrophages and dendritic cells. As costimulatory ligands, B7-1 which exists predominantly as dimer and the related protein B7-2, interact with the costimulatory receptors CD28 and cytotoxic T lymphocyte-associated antigen 4 (CTLA-4) expressed on T cells, and thus constitute one of the dominant pathways that regulate T cell activation and tolerance, cytokine production, and the generation of CTL. The B7/CD28/CTLA4 pathway has the ability to both positively and negatively regulate immune responses. CD80 is thus regarded as promising therapeutic targets for autoimmune diseases and various carcinomas.
