

A Reliable Research Partner in Life Science and Medicine

# PE/Cyanine 5 Anti-Human CD127/IL-7RA Antibody [A019D5]

Catalog Number: E-AB-F1152G

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Reactivity Human Mouse Host

Isotype Mouse IgG1, ĸ Clone No. A019D5

PE/Cyanine5 Mouse IgG1, κ Isotype Control[MOPC-21] [Product E-AB-F09792G] Isotype Control

Conjugation

**Conjugation Information** PE/Cyanine5 is designed to be excited by the Blue (488 nm), Green (532 nm) and

yellow-green (561 nm) lasers and detected using an optical filter centered near 670 nm

(e.g., a 690/50 nm bandpass filter).

Storage Buffer Phosphate buffered solution, pH 7.2, containing 0.09% stabilizer and 1% protein

protectant.

### **Applications**

### Recommended usage

**FCM** 

Each lot of this antibody is quality control tested by flow cytometric analysis. The amount of the reagent is suggested to be used 5 µL of antibody per test (million cells in 100 μL staining volume or per 100 μL of whole blood). Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use.

# **Preparation & Storage**

**Storage** Keep as concentrated solution.

This product can be stored at 2-8°C for 12 months. Please protected from prolonged

exposure to light and do not freeze.

**Shipping** Ice bag

#### **Antigen Information**

 $CD127; CDw127; IL-7RA; IL-7R\alpha; Interleukin-7\ receptor\ subunit\ alpha$ **Alternate Names** 

**Uniprot ID** P16871 Gene ID 3575

**Background** CD127 is a 60-90 kD type I transmembrane glycoprotein also known as IL-7 receptor α

> shared with the receptors for IL-2, IL-4, IL-9, IL-13, IL-15, and IL-21. CD127 is expressed on immature B cells through early pre-B stage cells, thymocytes (except CD4/CD8 double positive thymocytes), peripheral T cells, and bone marrow stromal cells. CD127 has been reported to be a useful marker for identifying memory and effector T cells. Studies have shown that CD127 expression is down-modulated on Treg cells. It can be used as a marker for differentiation of Treg and conventional T cells. The ligation of IL-7 with its receptor is important for stimulation of mature and

chain or IL-7Ra. It forms a heterodimer with the common y chain (yc or CD132) which is

immature T cells as well as immature B cell proliferation and development.
