### Background

CD47 (also integrin-associated protein/IAP and OA3) is a variably glycosylated, 40-60 kDa atypical member of the Ig-Superfamily. It is expressed on almost all cell types, including erythrocytes. CD47 binds to TSP-1 and SIRP  $\alpha$ , and forms a membrane complex with CD36 and  $\alpha$  v  $\beta$  3. Mature human CD47 is a 305 amino acid (aa), five-transmembrane glycoprotein.
