Data

SDS-PAGE analysis of Human PRRG3 proteins, 2 μg/lane of Recombinant Human PRRG3 proteins was resolved with SDS-PAGE under reducing conditions, showing bands at 23 kDa.

Background

This gene encodes proline-rich gamma-carboxyglutamic acid protein 3, a member of vitamin K-dependent membrane proteins containing gamma-carboxyglutamic acid residues. The encoded precursor protein contains an N-terminal propeptide that is required for the carboxylation of glutamate residues in the mature protein. Alternate splicing of this gene results in multiple transcript variants that encode the same protein.
