Background

Amphoterin-Induced Protein 2 (AMIGO2) is a single-pass type I membrane protein which belongs to the AMIGO family of immunoglobulin superfamily. Mature AMIGO2 contains an Ig-like C2-type (immunoglobulin-like) domain; 6 LRR (leucine-rich) repeats; a LRRCT domain; as well as a LRRNT domain. AMIGO2 is mainly expressed in breast; ovary; cervix; and uterus; although lower in lung; colon; and rectum. AMIGO2 required for depolarization-dependent survival of cultured cerebellar granule neurons. AMIGO2 may mediate homophilic as well as heterophilic cell-cell interaction with AMIGO1 or AMIGO3. AMIGO2 may contribute to signal transduction through its intracellular domain; and may be required for tumorigenesis of a subset of gastric adenocarcinomas.
