Recombinant Human M-CSF/CSF1 Protein (His Tag)

Catalog Number: PKSH032741

Note: Centrifuge before opening to ensure complete recovery of vial contents.

D		4.0
DOC	crip	tion
$\mathbf{p}_{\mathbf{c}}$	CIID	LLULL

Species Human

Source HEK293 Cells-derived Human M-CSF; CSF1 protein Glu33-Arg255, with an C-terminal

His

Calculated MW26.2 kDaObserved MW41 kDaAccessionP09603

Bio-activity Measured in a cell proliferation assay using M-NFS-60 mouse lymphoblast cells. The

 ED_{50} for this effect is 2-10 ng/mL.

Properties

Purity > 95 % as determined by reducing SDS-PAGE.

Endotoxin < 0.01 EU per μg of the protein as determined by the LAL method.

Storage Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80

°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of

reconstituted samples are stable at < -20°C for 3 months.

Shipping This product is provided as lyophilized powder which is shipped with ice packs.

Formulation Lyophilized from a 0.2 μm filtered solution of 20mM PB, 150mM NaCl, pH 7.2.

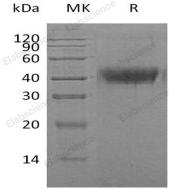

Normally 5% - 8% trehalose, mannitol and 0.01% Tween 80 are added as protectants

before lyophilization.

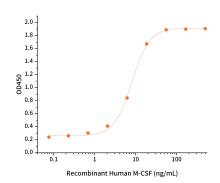

Please refer to the specific buffer information in the printed manual.

Reconstitution Please refer to the printed manual for detailed information.

Data

> 95 % as determined by reducing SDS-PAGE.

Measured in a cell proliferation assay using M-NFS-60 mouse lymphoblast cells. The ${\rm ED}_{50}$ for this effect is 2-10 ng/mL.

Background

For Research Use Only

Elabscience Bionovation Inc.

Macrophage Colony-Stimulating Factors (m-csf) are cytokines that act in hematopoiesis by controlling the production, differentiation, and function of 2 related white cell populations of the blood, the granulocytes and themonocytes-macrophages. CSF-1 promotes the release of proinflammatory chemokines, and thereby plays an important role in innate immunity and in inflammatory processes. It also plays an important role in the regulation of osteoclast proliferation and differentiation, the regulation of bone resorption, and is required for normal bone development. CSF-1 is required for normal male and female fertility and promotes reorganization of the actin cytoskeleton, regulates formation of membrane ruffles, cell adhesion and cell migration. it also plays a role in lipoprotein clearance.
