# APC Anti-Mouse CD161/NK1.1 Antibody[PK136]

Catalog Number: E-AB-F0987UE

Note: Centrifuge before opening to ensure complete recovery of vial contents.

#### Description

Reactivity Mouse
Host Mouse

**Isotype** Mouse IgG2a, κ

Clone No. PK136

**Isotype Control** APC Mouse IgG2a, κ Isotype Control[C1.18.4] [Product E-AB-F09803E]

Conjugation APC

**Conjugation Information** APC is designed to be excited by the Red (627-640 nm) laser and detected using an

optical filter centered near 660 nm (e.g., a 660/20 nm bandpass filter).

Storage Buffer Phosphate buffered solution, pH 7.2, containing 0.09% sodium azide and 1% BSA.

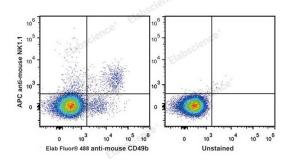

#### Applications Recommended usage

**FCM** Each lot of this antibody is quality control tested by flow cytometric analysis. Please

check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use. We suggest each investigator should titrate the reagent to obtain optimal results [The recommended concentration is  $0.1-1~\mu g/10^6$  cells

in 100 µL volume].

#### Data

C57BL/6 murine splenocytes are stained with APC Anti-

Mouse CD161/NK1.1 Antibody and Elab Fluor<sup>®</sup> 488 Anti-Mouse CD49b Antibody (Left). Unstained splenocytes are used as control.

#### **Preparation & Storage**

**Storage** Keep as concentrated solution.

This product can be stored at 2-8°C for 12 months. Please protected from prolonged

exposure to light and do not freeze.

Shipping Ice bag

#### **Antigen Information**

Alternate Names CD161 antigen-like family member C;CD161;NK1.1;CD161c;Killer cell lectin-like

### **Background**

NK-1.1 surface antigen, also known as CD161b/CD161c and Ly-55, is encoded by the NKR-P1B/NKR-P1C gene. It is expressed on NK cells and NK-T cells in some mouse strains, including C57BL/6, FVB/N, and NZB, but not AKR, BALB/c, CBA/J, C3H, DBA/1, DBA/2, NOD, SJL, and 129. Expression of NKR-P1C antigen has been correlated with lysis of tumor cells in vitro and rejection of bone marrow allografts in vivo. NK-1.1 has also been shown to play a role in NK cell activation, IFN-γ production, and cytotoxic granule release. NK-1.1 and DX5 are commonly used as mouse NK cell markers.
