# Recombinant Porcine HAVCR1 Protein(hlgG1 Fc Tag)

Catalog Number: PDMP100005

Note: Centrifuge before opening to ensure complete recovery of vial contents.

**Species** Porcine

Source Mammalian-derived porcine HAVCR1 protein Tyr21-Val281, with an C-terminal hIgG1

Fc

 Mol\_Mass
 53.6 kDa

 Accession
 C8CLK5

**Bio-activity** Not validated for activity

## **Properties**

**Purity** > 95% as determined by reducing SDS-PAGE.

**Endotoxin** < 1.0 EU/mg of the protein as determined by the LAL method

Storage Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80

°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of

reconstituted samples are stable at < -20°C for 3 months.

Shipping

This product is provided as lyophilized powder which is shipped with ice packs.

Formulation

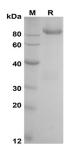

Lyophilized from a 0.2 μm filtered solution in PBS with 5% Trehalose and 5%

Mannitol.

**Reconstitution** It is recommended that sterile water be added to the vial to prepare a stock solution of

 $0.5\,\text{mg/mL}$ . Concentration is measured by UV-Vis

#### Data

SDS-PAGE analysis of porcine HAVCR1 proteins, 2µg/lane of Recombinant porcine HAVCR1 proteins was resolved with SDS-PAGE under reducing conditions, showing bands at 80-110 kDa

### Background

HAV cellular receptor 1 (HAVCR1), also known as Kidney injury molecule 1 (KIM-1) and T cell immunoglobulin mucin 1 (TIM-1), is a type of integral membrane glycoprotein. KIM-1 protein is widely expressed with the highest levels in the kidney and testis. It has been shown to play a major role as a human susceptibility gene for asthma, allergy, and autoimmunity. IgA llambda is a specific ligand of KIM-1 protein and that their association has a synergistic effect in virus-receptor interactions. KIM-1 involves in the pathogenesis of acute kidney injury. It had been confirmed that KIM-1 is a human urinary renal dysfunction biomarker. Moreover, KIM-1 protein is a novel regulatory molecule of flow-induced calcium signaling.
