Recombinant Human PRPS2 Protein (His Tag)

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Catalog Number: PKSH033005

| Description | | |
|----------------|--|--|
| Species | Human | |
| Mol_Mas s | 35.8 kDa | |
| Accession | P11908 | |
| Bio-activity | Not validated for activity | |
| Properties | | |
| Purity | > 95 % as determined by reducing SDS-PAGE. | |
| Endotoxin | < 1.0 EU per µg of the protein as determined by the LAL method. | |
| Storage | Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80 | |
| | °C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of | |
| | reconstituted samples are stable at $< -20^{\circ}$ C for 3 months. | |
| Shipping | This product is provided as lyophilized powder which is shipped with ice packs. | |
| Formulation | Lyophilized from a 0.2 µm filtered solution of PBS, pH 7.4. | |
| | Normally 5% - 8% trehalose, mannitol and 0.01% Tween 80 are added as protectants | |
| | before lyophilization. | |
| | Please refer to the specific buffer information in the printed manual. | |
| Reconstitution | Please refer to the printed manual for detailed information. | |

> 95 % as determined by reducing SDS-PAGE.

Background

Ribose-Phosphate Pyrophosphokinase 2 (PRPS2) is a phosphoribosyl pyrophosphate synthetase that belongs to the ribose-phosphate pyrophosphokinase family. PRPS2 is a homodimer. The active form is probably an hexamer composed of three homodimers. PRPS2 catalyzes the synthesis of phosphoribosylpyrophosphate (PRPP) that is essential for nucleotide synthesis. PRPS2 catalyzes the synthesis of 5-phosphoribosyl 1-pyrophosphate from ATP and D-ribose 5-phosphate. In addition, PRPS2 plays a central role in the synthesis of purines and pyrimidines.
