

# Recombinant Human Retbindin/RTBDN Protein (His Tag)

Catalog Number:PKSH032993

**Note:** Centrifuge before opening to ensure complete recovery of vial contents.

## Description

|                                    |                 |
|------------------------------------|-----------------|
| <b>Synonyms</b>                    | Retbindin;RTBDN |
| <b>Species</b>                     | Human           |
| <b>Expression Host</b>             | HEK293 Cells    |
| <b>Sequence</b>                    | Ser31-Pro229    |
| <b>Accession</b>                   | Q9BSG5          |
| <b>Calculated Molecular Weight</b> | 22.3 kDa        |
| <b>Observed molecular weight</b>   | 30 kDa          |
| <b>Tag</b>                         | C-His           |

## Properties

|                       |  |
|-----------------------|--|
| <b>Purity</b>         | > 95 % as determined by reducing SDS-PAGE.   |
| <b>Endotoxin</b>      | < 1.0 EU per µg of the protein as determined by the LAL method.  |
| <b>Storage</b>        | Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.                      |
| <b>Shipping</b>       | This product is provided as lyophilized powder which is shipped with ice packs.  |
| <b>Formulation</b>    | Lyophilized from a 0.2 µm filtered solution of 20mM PB,150mM NaCl,pH7.4. Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization.<br>Please refer to the specific buffer information in the printed manual |
| <b>Reconstitution</b> | Please refer to the printed manual for detailed information.   |

## Data

> 95 % as determined by reducing SDS-PAGE.

## Background

Human Retbindin is a 229 amino acid secreted protein that belongs to the folate receptor family. The gene that encodes retbindin exists as two alternatively spliced isoforms. Retbindin is first expressed in retina. It may play a role in binding retinoids and other carotenoids as it shares homology with riboflavin binding proteins. RTBDN gene was first identified in a study of human eye tissues.
