NDUFA12 Polyclonal Antibody

catalog number: E-AB-18397

This gene encodes a protein which is part of mitochondrial complex I, part of the oxidative phosphorylation system in mitochondria. Complex I transfers electrons to ubiquinone from NADH which establishes a proton gradient for the generation of ATP. Mutations in this gene are associated with Leigh syndrome due to mitochondrial complex I deficiency. Pseudogenes of this gene are located on chromosomes 5 and 13. Alternative splicing results in multiple transcript variants.
