A Reliable Research Partner in Life Science and Medicine

ICAM-1/CD54 Monoclonal Antibody(Capture)

catalog number: AN001650P

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Reactivity Human

Immunogen Recombinant Human ICAM-1/CD54 protein expressed by Mammalian

Host Mouse
Isotype Mouse IgG1
Clone 4C3

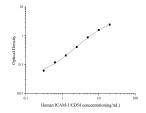

Purification Protein A/G Purification

Buffer Phosphate buffered solution, pH 7.2, containing 0.05% Proclin300.

Applications Recommended Dilution

ELISA Capture 2-8 μg/mL

Data

Sandwich ELISA-Recombinant Human ICAM-1/CD54 protein standard curve.Background subtracted standard curve using ICAM-1/CD54 antibody(AN001650P)

(Capture),ICAM-1/CD54 Antibody(AN001660P)(Detector) in sandwich ELISA.The reference range value for Recombinant Human ICAM-1/CD54 protein is 0.31-20 ng/mL.

Preparation & Storage

Storage Storage Store at 4°C valid for 12 months or -20°C valid for long term storage, avoid freeze /

thaw cycles.

Shipping The product is shipped with ice pack, upon receipt, store it immediately at the

temperature recommended.

Background

For Research Use Only

Elabscience Bionovation Inc.

A Reliable Research Partner in Life Science and Medicine

Intercellular adhesion molecule-1 (ICAM-1,or CD54) is a 90 kDa member of the immunoglobulin (Ig) superfamily and is critical for the firm arrest and transmigration of leukocytes out of blood vessels and into tissues. ICAM-1 is constitutively present on endothelial cells, but its expression is increased by proinflammatory cytokines. The endothelial expression of ICAM-1 is increased in atherosclerotic and transplant-associated atherosclerotic tissue and animal models of atherosclerosis. Additionally, ICAM-1 has been implicated in the progression of autoimmune diseases. ICAM-1 is a ligand for LFA-1(integrin). When activated, leukocytes bind to endothelial cells via ICAM-1/LFA-1 interaction and then transmigrate into tissues. Presence with heavy glycosylation and other structural characteristics, ICAM-1 possesses binding sites for some immune-associated ligands and serves as the binding site for entry of the major group of human Rhinovirus (HRV) into various cell types. ICAM-1 also becomes known for its affinity for Plasmodium falciparum-infected erythrocytes (PFIE), providing more of a role in infectious disease. Previous studies have shown that ICAM-1 is involved in inflammatory reactions and that a defect in ICAM-1 gene inhibits allergic contact hypersensitivity.
