Background

TOMM20 (Translocase Of Outer Mitochondrial Membrane 20) is a Protein Coding gene. Diseases associated with TOMM20 include Optic Atrophy 11 and Muscular Dystrophy, Congenital, Megaconial Type. Among its related pathways are Neuroscience and Metabolism of proteins. Gene Ontology (GO) annotations related to this gene include unfolded protein binding and P-P-bond-hydrolysis-driven protein transmembrane transporter activity. An important paralog of this gene is TOMM20L.
