# Recombinant Mouse ICAM-1/CD54 Protein(Fc Tag)

Catalog Number: PDMM100165

Note: Centrifuge before opening to ensure complete recovery of vial contents.

### **Description**

**Species** Mouse

Source Mammalian-derived Mouse ICAM-1/CD54 protein Gln28-Asn485, with C-terminal Fc

Calculated MW 75.2 kDa Observed MW 90 kDa Accession P13597

**Bio-activity** Not validated for activity

# **Properties**

**Purity** > 90% as determined by reducing SDS-PAGE.

Endotoxin < 1.0 EU/mg of the protein as determined by the LAL method

Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80 Storage

°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of

reconstituted samples are stable at < -20°C for 3 months.

This product is provided as lyophilized powder which is shipped with ice packs. Shipping Lyophilized from a 0.2 µm filtered solution in PBS with 5% Trehalose and 5% Formulation

Mannitol.

Reconstitution It is recommended that sterile water be added to the vial to prepare a stock solution of

0.5 mg/mL. Concentration is measured by UV-Vis.

### Data

SDS-PAGE analysis of Mouse ICAM-1/CD54 proteins, 2μg/lane of Recombinant Mouse ICAM-1/CD54 proteins was resolved with SDS-PAGE under reducing conditions, showing bands at 90 KD

Intercellular adhesion molecule-1 (ICAM-1, or CD54) is a 90 kDa member of the immunoglobulin (Ig) superfamily and is critical for the firm arrest and transmigration of leukocytes out of blood vessels and into tissues. ICAM-1 is constitutively present on endothelial cells , but its expression is increased by proinflammatory cytokines. The endothelial expression of ICAM-1 is increased in atherosclerotic and transplant-associated atherosclerotic tissue and animal models of atherosclerosis. Additionally , ICAM-1 has been implicated in the progression of autoimmune diseases. ICAM-1 is a ligand for LFA-1(integrin). When activated , leukocytes bind to endothelial cells via ICAM-1/LFA-1 interaction and then transmigrate into tissues. Presence with heavy glycosylation and other structural characteristics , ICAM-1 possesses binding sites for some immune-associated ligands and serves as the binding site for entry of the major group of Human Rhinovirus (HRV) into various cell types. ICAM-1 also becomes known for its affinity for Plasmodium falciparum-infected erythrocytes (PFIE) , providing more of a role in infectious disease. Previous studies have shown that ICAM-1 is involved in inflammatory reactions and that a defect in ICAM-1 gene inhibits allergic contact hypersensitivity.
