# Purified Anti-Human HLA-G Antibody[MEM-G/11]

catalog number: AN006210P

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Reactivity	Human
Immunogen	Recombinant Human HLA-G protein
Host	Mouse
Is otype Clone	Mouse IgGl, κ MEM-G/11
Purification	
	>98%, Protein A/G purified Unconjugated
Conjugation	
buffer	PBS, pH 7.2. Contains 0.05% proclin 300.
Applications	Recommended Dilution
FCM	$2 \ \mu g/mL(1 \times 10^5 - 5 \times 10^5 \text{ cells})$
Data	
18	
H JEG3 were stained with 0 Antibody[MEM-G/11] Isotype Control (Left) conjugated Goat Anti-	$10^{3}$ $10^{4}$ $10^{5}$ $10^{6}$ HAG Alexa Fluor® 647H D.2 μg Purified Anti-Human HLA-G (Right) and 0.2 μg Mouse IgG1, κ b, followed by Alexa Fluor® 647- House IgG Secondary Antibody.
JEG3 were stained with 0 Antibody[MEM-G/11] Isotype Control (Left) conjugated Goat Anti- Preparation & Storage	ILA-G Aleca Floor® 6474 ).2 μg Purified Anti-Human HLA-G (Right) and 0.2 μg Mouse IgG1, κ b, followed by Alexa Fluor® 647- Mouse IgG Secondary Antibody.
JEG3 were stained with 0 Antibody[MEM-G/11] Isotype Control (Left) conjugated Goat Anti-	AA-G Aleca Fluor® 64741 0.2 μg Purified Anti-Human HLA-G (Right) and 0.2 μg Mouse IgG1, κ 0, followed by Alexa Fluor® 647- Mouse IgG Secondary Antibody. Store at 4°C valid for 12 months or -20°C valid for long term storage, avoid freeze /

# Purified Anti-Human HLA-G Antibody[MEM-G/11]

#### catalog number: AN006210P

HLA-G Antibody (4H84) is an IgG1 k mouse monoclonal HLA-G antibody (also designated HLA major histocompatibility complex, class I, Gantibody, human leukocyte antigen (HLA) Gantibody, 45 kDa transmembrane class I human leukocyte antigen Gantibody, chromosome 6p22 gene complex class 1Gantibody, placenta trophoblast marker antibody, or fetal derived placental cell marker antibody) that detects the HLA-G protein of mouse, rat and human origin by WB, IP, IF and IHC(P). HLA-G Antibody (4H84) is available as both the non-conjugated anti-HLA-G antibody form, as well as multiple conjugated forms of anti-HLA-Gantibody, including agarose, HRP, PE, FITC and multiple Alexa Fluor® conjugates. Major histocompatibility complex (MHC), human leukocyte antigen (HLA) molecules are cell-surface receptors that bind foreign peptides and present them to T lymphocytes. MHC class I molecules consist of two polypeptide chains, an  $\alpha$  or heavy chain, and a non-covalently associated protein,  $\beta$ -2-microglobulin. Cytotoxic T lymphocytes bind antigenic peptides presented by MHC class I molecules. Antigens that bind to MHC class I molecules are typically 8-10 residues in length and are stabilized in a peptide binding groove. MHC class II molecules are encoded by polymorphic MHC genes and consist of a non-covalent complex of an a and b chain. Helper T lymphocytes bind antigenic peptides presented by MHC class II molecules. MHC class II molecules bind 13-18 amino acid antigenic peptides. Accumulating in endosomal/lysosomal compartments and on the surface of B cells, HLA-DM and -DO molecules regulate binding of exogenous peptides to class II molecules (HLA-DR) by sustaining a conformation that favors peptide exchange. The differential structural properties of MHC class I and class II molecules account for their respective roles in activating different populations of T lymphocytes.
