## IL-22 Monoclonal Antibody(Detector)

catalog number: AN001250P

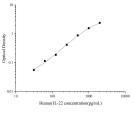

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description	
Reactivity	Human
Immunogen	Recombinant Human IL-22 protein expressed by Mammalian
Host	Mouse
Is otype	Mouse IgGl
Clone	4E6
Purification	Protein A/G Purification
Conjugation	Unconjugated
buffer	Phosphate buffered solution, pH 7.2, containing 0.05% proclin 300.

# ApplicationsRecommended DilutionELISA Detector0.1-0.4 µg/mL

#### Data

Sandwich ELISA-Recombinant Human IL-22 protein standard curve.Background subtracted standard curve using IL-22 antibody(AN001240P)(Capture),IL-22 antibody(AN001250P)(Detector) in sandwich ELISA.The reference range value for Recombinant Human IL-22 protein

is 31.25-2000 pg/mL.

Preparation & Storage	
Storage	Store at 4°C valid for 12 months or -20°C valid for long term storage, avoid freeze /
	thaw cycles.
Shipping	The product is shipped with ice pack, upon receipt, store it immediately at the temperature recommended.

#### Background

Interleukin-22 (II-22), also known as II-10-related T cell-derived inducible factor (II-TIF) was initially identified as a gene induced by II-9 in mouse T cells and mast cells. Mouse II-22 cDNA encodes a 179 amino acid (aa) residue protein with a putative 33 aa signal peptide that is cleaved to generate a 147 aa mature protein that shares approximately 79% and 22% aa sequence identity with human II-22 and II-10, respectively. The mouse II-22 gene is localized to chromosome 10. Although it exists as a single copy gene in many mouse strains, the II-22 gene is duplicated in some mouse strains including C57B1/6, FVB and 129. The two mouse genes designated II-TIF alpha and II-TIF beta, share greater than 98% sequence homology in their coding region. II-22 has been shown to activate STAT1 and STAT3 in several hepatoma cell lines and upregulate the production of acute phase proteins. II-22 is produced by normal mouse T cells upon Con A activation. Mouse II-22 expression is also induced in various organs upon lipopolysaccharide injection, suggesting that II-22 may be involved in inflammatory responses. The functional II-22 receptor complex consists of two receptor subunits, II-22 R (previously an orphan receptor named CRF2-9) and II-10 R beta (previously known as CRF2-4), belonging to the class II cytokine receptor family.
