Background

The protein encoded by this gene is a cytokine that belongs to the tumor necrosis factor (TNF) ligand family.This protein is abundantly expressed in endothelial cells, but is not expressed in either B or T cells.The expression of this protein is inducible by TNF and IL-1 alpha.This cytokine is a ligand for receptor TNFRSF25 and decoy receptor TNFRSF21/DR6.It can activate NF-kappaB and MAP kinases, and acts as an autocrine factor to induce apoptosis in endothelial cells.
