| Background   |  |
|--|--|
| <p>This gene was identified by involvement in some t(X;14) translocations associated with Human, Mouse acute T-cell proliferations. This region has a complex gene structure, with a common promoter and 5' exon spliced to two different sets of 3' exons that encode two different proteins. This gene represents the downstream 8 kDa protein that localizes to mitochondria.</p> |  |
