## **Recombinant Human FGF-17 Protein**

Catalog Number: PKSH032434

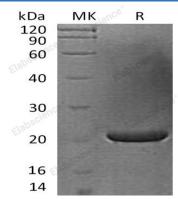

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description	
Species	Human
Mol_Mass	23.3 kDa
Accession	O60258
<b>Bio-activity</b>	Measure by its ability to induce 3T3 cells proliferation. The $\rm ED_{50}$ for this effect is <5

	ng/mL. The specific activity of recombinant human FGF-17 is $> 2 \times 10^5  \text{IU/mg}$ .
Properties	
Purity	> 98 % as determined by reducing SDS-PAGE.
Endotoxin	< 0.1 EU per µg of the protein as determined by the LAL method.
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80
	°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of
	reconstituted samples are stable at $< -20^{\circ}$ C for 3 months.
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.
Formulation	Lyophilized from sterile PBS,pH 8.0.
	Normally 5% - 8% trehalose, mannitol and 0.01% Tween 80 are added as protectants
	before lyophilization.
	Please refer to the specific buffer information in the printed manual.

**Reconstitution** Please refer to the printed manual for detailed information.

## Data

> 98 % as determined by reducing SDS-PAGE.

## Background

Fibroblast Growth Factor 17 (FGF17) is a member of the heparin-binding growth factors family that is prominently expressed in the cerebellum and cortex. Proteins of this family possess broad mitogenic and cell survival activities and they are involved in a variety of biological processes including embryonic development cell growth; morphogenesis; tissue repair; tumor growth; and invasion. FGF17 plays an important role in the regulation of embryonic development and it acts as signaling molecule in the induction and patterning of the embryonic brain. In addition; FGF17 stimulates the proliferation and activation of cells that express FGF receptors.
