SDS-PAGE analysis of Human FSH-b proteins, 2 µg/lane of Recombinant Human FSH-b proteins was resolved with SDS-PAGE under reducing conditions, showing bands at 20-28 kDa.

### Background

Follitropin Subunit  $\beta$  (FSHB) is a secreted protein that belongs to the glycoprotein hormones subunit  $\beta$  family. The pituitary glycoprotein hormone family includes follicle-stimulating hormone, luteinizing hormone, chorionic gonadotropin, and thyroid-stimulating hormone. FSHB exists in a heterodimer of a common  $\alpha$  chain and an unique  $\beta$  chain that confers biological specificity to thyrotropin, lutropin, follitropin, and gonadotropin. FSHB stimulates development of follicle and spermatogenesis in the reproductive organs. Defects in FSHB are a cause of isolated follicle-stimulating hormone deficiency (IFSHD).
