Applications	Recommended usage
FCM	Each lot of this antibody is quality control tested by flow cytometric analysis. Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use. We suggest each investigator should titrate the reagent to obtain optimal results [The recommended concentration is 0.1-1 µg/10 ⁶ cells

reagent to obtain optimal results [The recommended concentration is 0.1-1 μ g/10⁶ cells in 100 μ L volume].

Background	CD3, also known as T3, is a member of the lg superfamily and primarily expressed on
	T cells, NK-T cells, and at different levels on thymocytes during T cell differentiation.
	CD3 is composed of CD3 ϵ , δ , γ and ζ chains. It forms a TCR complex by associating
	with TCR α/β or γ/δ chains. CD3 plays a critical role in TCR signal transduction, T cell

activation, and antigen recognition by binding the peptide/MHC antigen complex.
