

A Reliable Research Partner in Life Science and Medicine

Recombinant Carbonic Anhydrase VB/CA5B Monoclonal Antibody

catalog number: AN300121P

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Reactivity Human

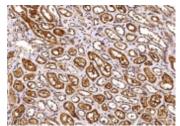

Immunogen Recombinant Human Carbonic Anhydrase VB / CA5B protein

HostRabbitIsotypeIgGClone9D11PurificationProtein A

Buffer 0.2 μm filtered solution in PBS

Applications Recommended Dilution

IHC-P 1:50-1:200

Immunohistochemistry of paraffin-embedded human kidney using Carbonic Anhydrase VB / CA5B Monoclonal Antibody at dilution of 1:100.

Preparation & Storage

Storage This antibody can be stored at 2°C-8°C for one month without detectable loss of activity. Antibody products are stable for twelve months from date of receipt when

stored at -20°C to -80°C. Preservative-Free. Avoid repeated freeze-thaw cycles.

Shipping Ice bag

Background

Carbonic anhydrases (CAs) are a large family of zinc metalloenzymes that catalyze the reversible hydration of carbon dioxide. They participate in a variety of biological processes, including respiration, calcification, acid-base balance, bone resorption, and the formation of aqueous humor, cerebrospinal fluid, saliva, and gastric acid. They show extensive diversity in tissue distribution and in their subcellular localization. CA VB is localized in the mitochondria and shows the highest sequence similarity to the other mitochondrial CA, CA VA. It has a wider tissue distribution than CA VA, which is restricted to the liver. The differences in tissue distribution suggest that the two mitochondrial carbonic anhydrases evolved to assume different physiologic roles. [provided by RefSeq, Jul 2005]
