A Reliable Research Partner in Life Science and Medicine

Plasminogen Activator/Urokinase Monoclonal Antibody(Detector)

catalog number: AN002180P

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Reactivity Human

Immunogen Recombinant Human Plasminogen Activator/Urokinase protein expressed by

Mammalian

Host Rat IgGl Rat IgGl Clone 9B8

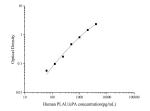

Purification Protein A/G Purification

Buffer Phosphate buffered solution, pH 7.2, containing 0.05% Proclin300.

Applications Recommended Dilution

ELISA Detector 0.1-0.4 μg/mL

Data

Sandwich ELISA-Recombinant Human Plasminogen

Activator/Urokinase protein standard curve.Background

subtracted standard curve using Plasminogen

Activator/Urokinase antibody(AN002170P)

(Capture), Plasminogen Activator/Urokinase

antibody(AN002180P)(Detector) in sandwich ELISA. The

reference range value for Recombinant Human Plasminogen

Activator/Urokinase protein is 62.5-4000 pg/mL.

Preparation & Storage

Storage Storage Store at 4°C valid for 12 months or -20°C valid for long term storage, avoid freeze /

thaw cycles.

Shipping The product is shipped with ice pack, upon receipt, store it immediately at the

temperature recommended.

Background

Elabscience Bionovation Inc.

This gene encodes a serine protease involved in degradation of the extracellular matrix and possibly tumor cell migration and proliferation. A specific polymorphism in this gene may be associated with late-onset Alzheimer's disease and also with decreased affinity for fibrin-binding. This protein converts plasminogen to plasmin by specific cleavage of an Arg-Val bond in plasminogen. Plasmin in turn cleaves this protein at a Lys-Ile bond to form a two-chain derivative in which a single disulfide bond connects the amino-terminal A-chain to the catalytically active, carboxy-terminal B-chain. This two-chain derivative is also called HMW-uPA (high molecular weight uPA). HMW-uPA can be further processed into LMW-uPA (low molecular weight uPA) by cleavage of chain A into a short chain A (A1) and an amino-terminal fragment. LMW-uPA is proteolytically active but does not bind to the uPA receptor. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
