

A Reliable Research Partner in Life Science and Medicine

VEGF R1/Fit-1 Polyclonal Antibody(Capture/Detector)

catalog number: AN000160P

Note: Centrifuge before opening to ensure complete recovery of vial contents.

.	4.0
Descri	ntion
Deseri	JULUII

Reactivity Human

Immunogen Recombinant Human VEGF R1/Flt-1 protein expressed by E.coli

Host Rabbit Isotype Rabbit IgG

Purification Antigen Affinity Purification

Conjugation Unconjugated

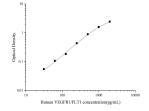

Buffer Phosphate buffered solution, pH 7.2, containing 0.05% proclin 300.

Applications Recommended Dilution

 ELISA Capture
 2-8 μg/mL

 ELISA Detector
 0.1-0.4 μg/mL

Data

Sandwich ELISA-Recombinant Human VEGF R1/Flt-1 protein standard curve.Background subtracted standard curve using VEGF R1/Flt-1 antibody(AN000160P)(Capture),VEGF

R1/Flt-1 antibody(AN000160P)(Detector) in sandwich

ELISA. The reference range value for Recombinant Human

VEGF R1/Flt-1 protein is 31.25-2000 pg/mL.

Preparation & Storage

Storage Storage Store at 4°C valid for 12 months or -20°C valid for long term storage, avoid freeze /

Tyrosine-protein kinase that acts as a cell-surface receptor for VEGFA, VEGFB and PGF, and plays an essential role in the development of embryonic vasculature, the regulation of angiogenesis, cell survival, cell migration, macrophage function, chemotaxis, and cancer cell invasion. Acts as a positive regulator of postnatal retinal hyaloid vessel regression. May play an essential role as a negative regulator of embryonic angiogenesis by inhibiting excessive proliferation of endothelial cells. Can promote endothelial cell proliferation, survival and angiogenesis in adulthood. Its function in promoting cell proliferation seems to be cell-type specific. Promotes PGF-mediated proliferation of endothelial cells, proliferation of some types of cancer cells, but does not promote proliferation of normal fibroblasts (in vitro). Has very high affinity for VEGFA and relatively low protein kinase activity, may function as a negative regulator of VEGFA signaling by limiting the amount of free VEGFA and preventing its binding to KDR. Modulates KDR signaling by forming heterodimers with KDR. ligand binding leads to the activation of several signaling cascades. Activation of PICG leads to the production of the cellular signaling molecules diacylglycerol and inositol 1,4,5-trisphosphate and the activation of protein kinase C. Mediates phosphorylation of PIK3R1, the regulatory subunit of phosphatidylinositol 3kinase, leading to activation of phosphatidy linositol kinase and the downstream signaling pathway. Mediates activation of MAPK1/ERK2,MAPK3/ERK1 and the MAP kinase signaling pathway, as well as of the AKT1 signaling pathway. Phosphorylates SRC and YES1, and may also phosphorylate CBl. Promotes phosphorylation of AKT1 at 'Ser-473'. Promotes phosphorylation of PTK2/FAK1.
