Background

LC3,also known as microtubule-associated protein 1 light chain 3 (MAP1LC3),is a mammalian homolog of the yeast Atg8p (autophagy-related 8 protein) that is involved in autophagy process. Three isoforms of LC3 exist as LC3A, LC3B,and LC3C. LC3 is first synthesized as pro-LC3,and undergoes C-terminal cleavage to yield a cytosolic precursor known as LC3-I. During autophagy LC3-I is subsequently conjugated to PE lipid as lipidated form: LC3-II. The lipidated form migrates faster on SDS-PAGE gel. The increased the level of LC3-II has been widely used as autophagy marker. This antibody recognizes both LC3-I and LC3-II.
