Elabscience®

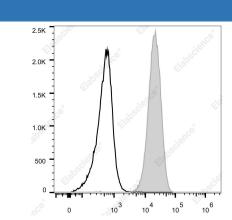

Elab Fluor[®] Violet 540 Anti-Mouse CD45 Antibody[30-F11]

Catalog Number: E-AB-F1136UT3

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description	
Reactivity	Mouse
Host	Rat
lsotype	Rat lgG2b, к
Clone No.	30-F11
Isotype Control	Elab Fluor [®] Violet 540 Rat IgG2b, к Isotype Control[LTF-2] [Product E-AB-F09843T3]
Conjugation	Elab Fluor [®] Violet 540
Conjugation Information	Elab Fluor [®] Violet 540 is designed to be excited by the violet laser (405 nm) and detected using an optical filter centered near 548 nm (e.g., a 572/28 nm bandpass filter).
Storage Buffer	Phosphate buffered solution, pH 7.2, containing 0.09% stabilizer and 1% protein protectant.
Applications	Recommended usage
FCM	Each lot of this antibody is quality control tested by flow cytometric analysis. Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use. We suggest each investigator should titrate the reagent to obtain optimal results [The recommended concentration is 0.1-1.ug/10 ⁶ cells]

reagent to obtain optimal results [The recommended concentration is 0.1-1 μ g/10⁶ cells in 100 μ L volume].

Data

Staining of C57BL/6 murine splenocytes with Elab Fluor[®] Violet 540 Anti-Mouse CD45 Antibody[30-F11](filled gray

histogram) or Elab Fluor[®] Violet 540 Rat IgG2b, κ Isotype Control(empty black histogram).Total viable cells were used for analysis.

Preparation & Storage	
Storage	Keep as concentrated solution. This product can be stored at 2-8°C for 12 months. Please protected from prolonged
Shipping	exposure to light and do not freeze. Ice bag
Antigen Information	
Alternate Names Uniprot ID	CD45;L-CA;Ly-5;Ptprc;Receptor-type tyrosine-protein phosphatase C;T200 P06800

Gene ID Background

19264

CD45 is a 180-240 kD glycoprotein also known as the leukocyte common antigen (LC A), T200, or Ly-5. It is a member of the protein tyrosine phosphatase (PTP) family, expressed on all hematopoietic cells except mature erythrocytes and platelets. There are different isoforms of CD45 that arise from alternative splicing of exons 4, 5, and 6, which encode A, B, and C determinants, respectively. CD45 plays a key role in TCR and BCR signal transduction. These isoforms are very specific to the activation and maturation state of the cell as well as cell type. The primary ligands for CD45 are galectin-1, CD2, CD3, CD4, TCR, CD22, and Thy-1.
