## Purified Anti-Mouse IL-17A Antibody[TC11-18H10.1]

## catalog number: E-AB-F1199A

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Reactivity	
v	Mouse
Immunogen	Recombinant Mouse IL-17A protein
Host	Rat
Isotype	Rat IgGl, κ
Clone	TC11-18H10.1
Purification	>98%, Protein A/G purified
Buffer	Phosphate-buffered solution, pH 7.2, containing 0.05% non-protein stabilizer. Dialyze to completely remove the stabilizer prior to labeling.
Applications	Recommended Dilution
FCM	$2 \mu g/mL(1 \times 10^5 - 5 \times 10^5 \text{ cells})$
Data	
Count 460	
HEK293T cells tra encoding Mouse IL Purified Anti-Mouse (Right) and 0.2 µg I followed by Alexa Fluc	<sup>104</sup> <sup>105</sup> <sup>106</sup> <sup>107</sup> <sup>104</sup> <sup>105</sup> <sup>106</sup> <sup>107</sup> <sup>107</sup> <sup>105</sup> <sup>106</sup> <sup>107</sup> <sup>107</sup> <sup>105</sup> <sup>106</sup> <sup>107</sup> <sup>107</sup> <sup>108</sup> <sup>108</sup> <sup>107</sup>

HEK293T cells tra encoding Mouse IL Purified Anti-Mouse (Right) and 0.2 μg I followed by Alexa Fluc Se	IL-17A Alexa Floor®647H ansfected with pcDNA3.1 plasmid 17A gene were stained with 0.2 μg e IL-17A Antibody[TC11-18H10.1] Rat IgG1, κ Isotype Control (Left), or® 647-conjugated Goat Anti-Rat IgG condary Antibody.
HEK293T cells tra encoding Mouse IL Purified Anti-Mouse (Right) and 0.2 μg I followed by Alexa Fluc Se Preparation & Storag	L-17A Alexa Floor®647H ansfected with pcDNA3.1 plasmid 17A gene were stained with 0.2 μg e IL-17A Antibody[TC11-18H10.1] Rat IgG1, κ Isotype Control (Left), or® 647-conjugated Goat Anti-Rat IgG condary Antibody.
HEK293T cells tra encoding Mouse IL Purified Anti-Mouse (Right) and 0.2 μg I followed by Alexa Fluc Se Preparation & Storag	IL-17A Alesa Floor®647H ansfected with pcDNA3.1 plasmid 17A gene were stained with 0.2 μg e IL-17A Antibody[TC11-18H10.1] Rat IgG1, κ Isotype Control (Left), or® 647-conjugated Goat Anti-Rat IgG condary Antibody. ge Store at 4°C valid for 12 months or -20°C valid for long term storage, avoid freeze /

## **Elabscience**®

Interleukin-17A (IL-17A), also known as CTLA-8, is a 15-20 kDa glycosylated cytokine that plays an important role in anti-microbial and chronic inflammation. The six IL-17 cytokines (IL-17A-F) are encoded by separate genes but adopt a conserved cystine knot fold. Mature rat IL-17A shares 60% and 89% amino acid sequence identity with human and mouse IL-17A, respectively. IL-17A is secreted by Th17 cells, gamma /δ T cells, iNKT cells, NK cells, LTi cells, neutrophils, and intestinal Paneth cells. It forms disulfide-linked homodimers as well as disulfide-linked heterodimers with IL-17F. IL-17A exerts its effects through the transmembrane IL-17RA in complex with IL-17RC or IL-17RD. Both IL-17RA and IL-17RC are required for responsiveness to heterodimeric IL-17A/F. IL-17A promotes protective mucosal and epidermal inflammation in response to microbial infection. It induces chemokine production, neutrophil influx, and the production of antibacterial peptides. IL-17A/F likewise induces neutrophil migration, but IL-17F does not. IL-17A additionally enhances the production of inflammatory mediators by rheumatoid synovial fibroblasts and contributes to TNF-alpha induced shock. In contrast, it can protect against the progression of colitis by limiting chronic inflammation. IL-17A exercise the formation of autoreactive germinal centers and exacerbates the onset and progression of experimental models of autoimmunity. IL-17A has been shown to exert either tumorigenic or anti-tumor effects.
