TSHB Polyclonal Antibody

catalog number: E-AB-17957

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description Reactivity Human;Mouse;Rat Immunogen Synthetic peptide of human TSHB Host Rabbit Isotype IgG Purification Antigen affinity purification Conjugation Unconjugated buffer Phosphate buffered solution, pH 7.4, containing 0.05% stabilizer and 50% p Applications Recommended Dilution HC 1:40-1:200 Data Immunohistochemistry of paraffin-embedded Human tonsil tissue using TSHB Polyclonal Antibody at dilution of 1:40(×200) 1:40(×200) Preparation & Storage Store at -20°C Valid for 12 months. Avoid freeze / thaw cycles. Shipping The product is shipped with ice pack,upon receipt,store it immediately at the product is shipped with ice pack,upon receipt,store it immediately at the product is shipped with ice pack.upon receipt.store it immediately at the product is shipped with ice pack.upon receipt.store it immediately at the product is shipped with ice pack.upon receipt.store it immediately at the product is shipped with ice pack.upon receipt.store it immediately at the product is shipped with ice pack.upon receipt.store it immediately at the product is shipped with ice pack.upon receipt.store it immediately at the product is shipped with ice pack.upon receipt.store it immediately at the product is shipped with ice pack.upon receipt.store it immediately at the product is shipped with ice pack.upon receipt.store it immediately at the product is shipped with ice

Background	
The four human glycoprotein hormones chorionic gonadotropin (CG), luteinizing hormone (LH), follicle stimu hormone (FSH), and thyroid stimulating hormone (TSH) are dimers consisting of alpha and beta subunits that associated noncovalently. The alpha subunits of these hormones are identical, however, their beta chains are and confer biological specificity. Thyroid stimulating hormone functions in the control of thyroid structure a metabolism. The protein encoded by this gene is the beta subunit of thyroid stimulating hormone. Mutations	

gene are associated with congenital central and secondary hypothyroidism and Hashimoto's thyroiditis. Alternative

For Research Use Only

splicing of this gene results in multiple transcript variants.
