Elabscience®

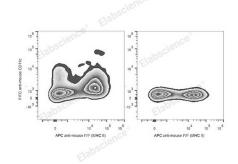

FITC Anti-Mouse CD11c Antibody[N418]

Catalog Number: E-AB-F0991C

Note: Centrifuge before opening to ensure complete recovery of vial contents.

| Description | |
|-------------------------|---|
| Reactivity | Mouse |
| Host | Armenian Hamster |
| Isotype | Armenian Hamster IgG |
| Clone No. | N418 |
| Isotype Control | FITC Armenian Hamster IgG Isotype Control[PIP] [Product E-AB-F09852C] |
| Conjugation | FITC |
| Conjugation Information | FITC is designed to be excited by the Blue laser (488 nm) and detected using an optical filter centered near 530 nm (e.g., a 525/40 nm bandpass filter). |
| Storage Buffer | Phosphate buffered solution, pH 7.2, containing 0.09% stabilizer and 1% protein protectant. |
| Applications | Recommended usage |
| FCM | Each lot of this antibody is quality control tested by flow cytometric analysis. The amount of the reagent is suggested to be used 5 μ L of antibody per test (million cells in 100 μ L staining volume or per 100 μ L of whole blood). Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use. |

Data

C57BL/6 murine splenocytes are stained with FITC Anti-Mouse CD11c Antibody and APC Anti-Mouse MHC II (I-A/I-E) Antibody (Left). Splenocytes stained with APC Anti-Mouse MHC II (I-A/I-E) Antibody (Right) are used as control.

| Preparation & Storag | ge |

Gene ID Background

16411

CD11c is a 150 kD glycoprotein also known as α X integrin, CR4, and p150. CD11c forms a α X β 2 heterodimer with β 2 integrin (CD18). It is primarily expressed on dendritic cells, NK cells, a subset of intestinal intraepithelial lymphocytes (IEL), and some activated T cells. The α X β 2 integrin plays an important role in cell-cell contact by binding its ligands: iC3b, fibrinogen and CD54.
