

200 mM L-Alanyl-L-Glutamine Solution, 100 ×

Cat. No.: PB180419

Size: 100mL

General Information

| | |
|----------------------|------------------|
| Product Form | Liquid |
| Concentration | 100 × |
| L-Alanyl-L-Glutamine | 200 mM |
| Recommended working | 1 mM-4 mM |
| Dissolvent | 0.85% NaCl |
| Storage | 2-8°C |
| Shipping | Room Temperature |
| Expiration date | 36 months |

Background

L-alanyl-L-glutamine is an advanced cell culture additive and as a substitute for L-glutamine. L-glutamine is a necessary nutrient element for cells. But it is unstable in solution and can be degraded spontaneously to form ammonia and pyroglutamic acid and ammonia is harmful to cells. L-alanyl-L-glutamine is stable in aqueous solution and does not degrade spontaneously. The mechanism used by the cell is that the cell gradually releases a peptidase into the culture medium during cell culture. The peptidase can hydrolyze L-alanyl-L-glutamine into L-alanine and L-glutamine. L-alanine and L-glutamine can be absorbed and utilized by cells. This not only increases the utilization rate of L-glutamine, but also does not produce excess ammonia, which is more beneficial to cell growth.

Notes

1. This product is only used for scientific research or further research, not for diagnosis and treatment.
2. This product is sterilized by 0.1 µm filtration.
3. It is necessary to pay attention to the aseptic operation and avoid the contamination.
