## Fetuin B Polyclonal Antibody(Capture/Detector)

catalog number: AN003760P

Note: Centrifuge before opening to ensure complete recovery of vial contents.

| Description    |                                                                    |
|----------------|--------------------------------------------------------------------|
| Reactivity     | Human                                                              |
| Immunogen      | Recombinant Human Fetuin B Protein expressed by Mammalian          |
| Host           | Rabbit                                                             |
| Isotype        | Rabbit IgG                                                         |
| Purification   | Antigen Affinity Purification                                      |
| Conjugation    | Unconjugated                                                       |
| Buffer         | Phosphate buffered solution, pH 7.2, containing 0.05% proclin 300. |
| Applications   | Recommended Dilution                                               |
| ELISA Capture  | 2-8 µg/mL                                                          |
| ELISA Detector | 0.1-0.4 μg/mL                                                      |
| WB             | 1:500-1:1000                                                       |

## Data

Sandwich ELISA-Recombinant Human Fetuin B Protein standard curve.Background subtracted standard curve using Anti-Fetuin B antibody(AN003760P)(Capture),Anti-Fetuin B antibody(AN003760P)(Detector).The reference range value is 0.31-20 ng/mL for human Western blot with Anti Fetuin B Polyclonal antibody at dilution of 1:500. Lane 1: Human plasma. **Observed-MW:45 kDa** Calculated-MW:42 kDa

| IS 0.31-20 llg        |                                                                                       |
|-----------------------|---------------------------------------------------------------------------------------|
| Preparation & Storage |                                                                                       |
| Storage               | Store at 4°C valid for 12 months or -20°C valid for long term storage, avoid freeze / |
|                       | thaw cycles.                                                                          |
| Shipping              | The product is shipped with ice pack, upon receipt, store it immediately at the       |
|                       | temperature recommended.                                                              |
| Background            |                                                                                       |

## **Elabscience**®

Fetuins are members of the cystatin superfamily of cysteine protease inhibitors. Additional members of this superfamily are kininogen and histidine-rich glycoprotein. Fetuin A and B are two known members of the fetuin family. Hepatocytes are believed to be the principal cellular source, but other cell types also express it. Fetuin A, also known as alpha 2-Heremans-Schmid glycoprotein, is an inhibitor of basic calcium phosphate precipitation and a negative acute-phase protein. Normal circulating levels of Fetuin A in adults (300-600 ug/mL) fall significantly (30-50%) during injury and infection. Fetuin B is a newer member whose function is not fully characterized. Fetuin A and B display similarities and differences in their characteristics. Fetuin B exhibits reduction of calcification, while both mRNA levels were down-regulated during the acute phase in inflammation-induced rats. However, they share only 20% amino acid sequence identity. The amounts of Fetuin B in human serum, unlike Fetuin A, vary with gender and are higher in females than in males.
