# Recombinant Mouse IL-5RA/IL-5 Rα Protein (Human Cells, His Tag)

Catalog Number: PKSM041096

Note: Centrifuge before opening to ensure complete recovery of vial contents.

## **Description**

Species Mouse

Source HEK293 Cells-derived Mouse IL-5RA/IL-5 Rα protein Asp18-His339, with an C-

terminal His

Calculated MW37.6 kDaObserved MW48 kDaAccessionP21183

**Bio-activity** Not validated for activity

## **Properties**

**Purity** > 95 % as determined by reducing SDS-PAGE.

**Endotoxin** < 1.0 EU per µg of the protein as determined by the LAL method.

**Storage** Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80

°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of

reconstituted samples are stable at < -20°C for 3 months.

**Shipping** This product is provided as lyophilized powder which is shipped with ice packs.

Formulation Lyophilized from a 0.2 µm filtered solution of PBS, 5% Trehalose, pH 7.4.

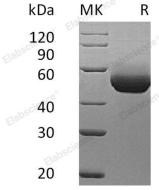

Normally 5% - 8% trehalose, mannitol and 0.01% Tween 80 are added as protectants

before lyophilization.

Please refer to the specific buffer information in the printed manual.

**Reconstitution** Please refer to the printed manual for detailed information.

### Data

> 95 % as determined by reducing SDS-PAGE.

## Background

#### Elabscience Bionovation Inc.

A Reliable Research Partner in Life Science and Medicine

Interleukin 5 Receptor alpha (IL-5 R $\alpha$ ), also known as CD125, is a hematopoietin receptor that plays a dominant role in eosinophil biology. Mature mouse IL-5 R $\alpha$  consists of a 322 amino acid (aa) extracellular domain (ECD) with a WSxWS motif and a four cysteine motif, a 22 aa transmembrane segment, and a 54 aa cytoplasmic domain. The high affinity receptor for IL-5 is a complex that consists of the ligand binding IL-5 R $\alpha$  and the transmembrane common  $\beta$  chain ( $\beta$ c/CD131) which is shared with the receptor complexes for IL-3 and GM-CSF. IL-5 R $\alpha$  binds IL-5 at low affinity and then associates with preformed  $\beta$ c oligomers to form the signaling-competent receptor complex IL-5 stimulation of CD34+hematopoietic progenitor cells induces the up-regulation of transmembrane IL-5 R $\alpha$  followed by eosinophilic differentiation and activation. IL-5 R $\alpha$  also promotes the differentiation of basophils and B cells. Exposure of mature eosinophils to IL-5 attenuates their IL-5 responsiveness by inducing the down-regulation of surface IL-5 R $\alpha$  and increased production of soluble IL-5 R $\alpha$ .
