

Anti-MERS-CoV Nucleocapsid Protein Polyclonal Antibody

catalog number: E-AB-V1282

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description	
Reactivity	MERS-CoV
Immunogen	A synthetic peptide corresponding to the center region of MERS-CoV (NCoV / Novel coronavirus) Nucleocapsid Protein (NP protein)
Host	Rabbit
Isotype	Rabbit IgG
Purification	Antigen Affinity
Buffer	0.2 µm filtered solution in PBS.
Applications	Recommended Dilution
WB	1:1000-1:5000

Data

Western Blot analysis of Recombinant MERS-CoV Nucleoprotein / NP protein (His Tag)(PKSV030235 with 500ng, 200ng and 100ng) using Anti-MERS-CoV Nucleocapsid Protein Polyclonal Antibody at dilution of 1:1000.

Preparation & Storage	
Storage	Store at -20°C Valid for 12 months. Avoid freeze / thaw cycles.
Shipping	The product is shipped with ice pack, upon receipt, store it immediately at the temperature recommended.

Background

Coronaviruses are enveloped viruses with a positive-sense RNA genome and with a nucleocapsid of helical symmetry. Coronavirus nucleoproteins localize to the cytoplasm and the nucleolus, a subnuclear structure, in both virus-infected primary cells and in cells transfected with plasmids that express N protein. Coronavirus N protein is required for coronavirus RNA synthesis, and has RNA chaperone activity that may be involved in template switch. Nucleocapsid protein is a most abundant protein of coronavirus. During virion assembly, N protein binds to viral RNA and leads to formation of the helical nucleocapsid. Nucleocapsid protein is a highly immunogenic phosphoprotein also implicated in viral genome replication and in modulating cell signaling pathways. Because of the conservation of N protein sequence and its strong immunogenicity, the N protein of coronavirus is chosen as a diagnostic tool.
