## Background

This proten can activates apoptosis.It is inhibited by DFFB and interacts with DFFA and DFFB. It has high levels expression in liver and small intestine, and has lower levels expression in colon, kidney and spleen.CideB specifically interacts with VLDL structural protein, apolipoprotein B100 (apoB100), but not with albumin, a PTV cargo protein. It can interacts with COPII components, Sar1 and Sec24
