# Factor IX/PTC/F9 Polyclonal Antibody(Capture/Detector)

**catalog number: AN001130P**

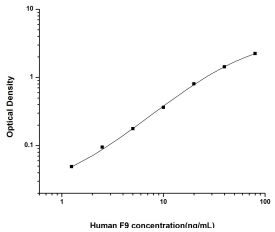
**Note:** *Centrifuge before opening to ensure complete recovery of vial contents.*

## Description

| | |
|---|---|
| **Reactivity** | Human |
| **Immunogen** | Recombinant Human Factor IX/PTC/F9 protein expressed by Mammalian |
| **Host** | Rabbit |
| **Isotype** | Rabbit IgG |
| **Purification** | Antigen Affinity Purification |
| **Buffer** | Phosphate buffered solution, pH 7.2, containing 0.05% proclin 300. |

| Applications | Recommended Dilution |
|---|---|
| **ELISA Capture** | 2-8 μg/mL |
| **ELISA Detector** | 0.1-0.4 μg/mL |

## Data



Sandwich ELISA-Recombinant Human Factor IX/PTC/F9 protein standard curve.Background subtracted standard curve using Factor IX/PTC/F9 antibody(AN001130P) (Capture),Factor IX/PTC/F9 antibody(AN001130P) (Detector) in sandwich ELISA.The reference range value for Recombinant Human Factor IX/PTC/F9 protein is 1.25-80 ng/mL.

## Preparation & Storage

| | |
|---|---|
| **Storage** | Store at 4°C valid for 12 months or -20°C valid for long term storage, avoid freeze / thaw cycles. |
| **Shipping** | The product is shipped with ice pack, upon receipt, store it immediately at the temperature recommended. |

## Background

This gene encodes vitamin K-dependent coagulation factor IX that circulates in the blood as an inactive zymogen. This factor is converted to an active form by factor XIa, which excises the activation peptide and thus generates a heavy chain and a light chain held together by one or more disulfide bonds. The role of this activated factor IX in the blood coagulation cascade is to activate factor X to its active form through interactions with Ca+2 ions, membrane phospholipids, and factor VIII. Alterations of this gene, including point mutations, insertions and deletions, cause factor IX deficiency, which is a recessive X-linked disorder, also called hemophilia B or Christmas disease.
