Recombinant Human Interleukin-23/IL-23 (C-Fc)

Catalog Number: PKSH033874

Note: *Centrifuge before opening to ensure complete recovery of vial contents.*

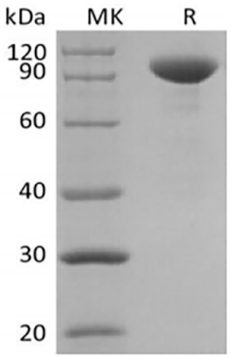
Description

Species	Human
Source	HEK293 Cells-derived Human Interleukin-23;IL-23 protein Ile23-Ser328&Ala21-Pro189, with an C-terminal Fc
Calculated MW	81.3 kDa
Observed MW	80-110 kDa
Accession	P29460&Q9NPF7
Bio-activity	Measured by its ability to induce STAT reporter activity in 293F human embryonic kidney cells. The ED_{50} for this effect is 179.42 ng/ml.

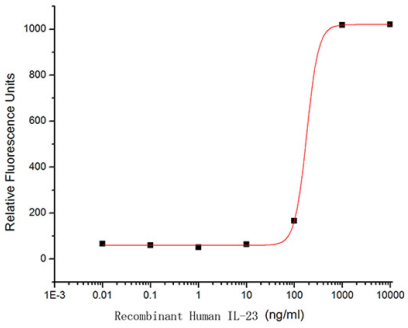
Properties

Purity	> 95 % as determined by reducing SDS-PAGE.
Endotoxin	< 1.0 EU per μg of the protein as determined by the LAL method.
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80 ℃. Reconstituted protein solution can be stored at 4-8℃ for 2-7 days. Aliquots of reconstituted samples are stable at < -20℃ for 3 months.
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.
Formulation	Lyophilized from a 0.2 μm filtered solution of 20mM PB, 150mM NaCl, pH 7.4. Normally 5% - 8% trehalose, mannitol and 0.01% Tween 80 are added as protectants before lyophilization. Please refer to the specific buffer information in the printed manual.
Reconstitution	Please refer to the printed manual for detailed information.

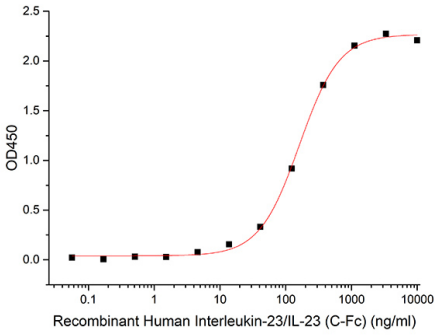
Data



> 95 % as determined by reducing SDS-PAGE.



Measured by its ability to induce STAT reporter activity in 293F human embryonic kidney cells. The ED_{50} for this effect is 179.42 ng/ml.



Immobilized Human IL-23R-His(PKSH032578) at 5μg/ml (100 μl/well)can bind Human IL-23-Fc (PKSH033874).The ED50 of Human IL-23-Fc (PKSH033874) is 0.187 μg/ml.

Background

Interleukin 23 (IL-23) is a heterodimeric cytokine composed of two disulfide-linked subunits, a p19 subunit that is unique to IL-23, and a p40 subunit that is shared with IL-12. The p19 subunit has homology to the p35 subunit of IL-12, as well as to other single chain cytokines such as IL-6 and IL-11. The p40 subunit is homologous to the extracellular domains of the hematopoietic cytokine receptors. Although p19 is expressed by activated macrophages, dendritic cells, T cells, and endothelial cells, only activated macrophages and dendritic cells express p40 concurrently to produce IL-23. IL-23 has biological activities that are similar to, but distinct from IL-12. Both IL-12 and IL-23 induce proliferation and IFN-gamma production by human T cells. While IL-12 acts on both naive and memory human T cells, the effects of IL-23 is restricted to memory T cells.
