Shipping	The product is shipped with ice pack,upon receipt,store it immediately at the temperature recommended.

Background

This gene was identified as a retinoid acid (RA) receptor-responsive gene.It encodes a type 1 membrane protein.The expression of this gene is upregulated by tazarotene as well as by retinoic acid receptors.The expression of this gene is found to be downregulated in prostate cancer, which is caused by the methylation of its promoter and CpG island. Alternatively spliced transcript variant encoding distinct isoforms have been observed.
