| Applications            | Recommended usage   |
| FCM                     | Each lot of this antibody is quality control tested by flow cytometric analysis. The amount of the reagent is suggested to be used 5 $\mu$ L of antibody per test (million cells in 100 $\mu$ L staining volume or per 100 $\mu$ L of whole blood). Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use. |

CD49d is a 150 kD glycoprotein, also known as  $\alpha$ 4 integrin or VLA-4  $\alpha$  chain. It is a member of the integrin family, expressed on T and B cells, monocytes, eosinophils, basophils, mast cells, thymocytes, NK cells, and dendritic cells. CD49d is a heterodimer expressed with either of two  $\beta$  chains,  $\beta$ 1 (CD29) or  $\beta$ 7, to form the VLA-4 ( integrin  $\alpha$ 4 $\beta$ 1) or LPAM-1 (integrin  $\alpha$ 4 $\beta$ 7) complexes. CD49d plays a critical role in adhesion and T cell costimulation. The primary ligands for CD49d are VCAM-1, MAdCAM-1, and fibronectin.
