### Data

SDS-PAGE analysis of Mouse IL-5 proteins, 2 µg/lane of Recombinant Mouse IL-5 proteins was resolved with SDS-PAGE under reducing conditions, showing bands at 39.5 KD

### Background

IL-5 (Interleukin-5) is a secreted cytokine that is expressed as a covalent dimer. It is produced by activated Th2 cells, eosinophils, mast cells, and iNKT cells and promotes eosinophilic and basophilic differentiation and activation. IL-5 signals through a receptor complex containing IL-5 R alpha and the Common beta Chain/CD131 on eosinophils and basophils. Naturally occurring soluble forms of IL-5 R alpha retain the ability to bind IL-5 and limit its bioavailability.
