

SMC1A Polyclonal Antibody

Catalog Number: E-AB-18291

Note: Centrifuge before opening to ensure complete recovery of vial contents.

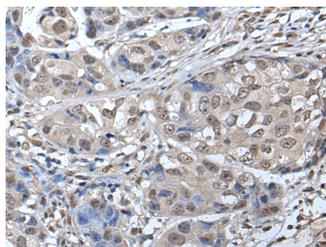

Description

Reactivity	Human, Mouse, Rat
Immunogen	Fusion protein of human SMC1A
Host	Rabbit
Isotype	IgG
Purification	Antigen affinity purification
Conjugation	Unconjugated
Formulation	PBS with 0.05% NaN ₃ and 40% Glycerol, pH7.4

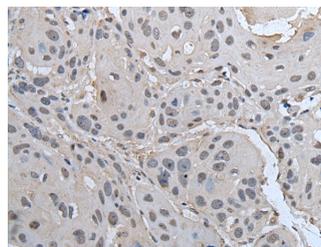

Applications Recommended Dilution

IHC	1:30-1:150
ELISA	1:5000-1:10000

Data

Immunohistochemistry of paraffin-embedded Human breast cancer tissue using SMC1A Polyclonal Antibody at dilution of 1:45 (x200)

Immunohistochemistry of paraffin-embedded Human esophagus cancer tissue using SMC1A Polyclonal Antibody at dilution of 1:45 (x200)

Preparation & Storage

Storage Store at -20°C. Avoid freeze / thaw cycles.

Background

Proper cohesion of sister chromatids is a prerequisite for the correct segregation of chromosomes during cell division. The cohesin multiprotein complex is required for sister chromatid cohesion. This complex is composed partly of two structural maintenance of chromosomes (SMC) proteins, SMC3 and either SMC1B or the protein encoded by this gene. Most of the cohesin complexes dissociate from the chromosomes before mitosis, although those complexes at the kinetochore remain. Therefore, the encoded protein is thought to be an important part of functional kinetochores. In addition, this protein interacts with BRCA1 and is phosphorylated by ATM, indicating a potential role for this protein in DNA repair. This gene, which belongs to the SMC gene family, is located in an area of the X-chromosome that escapes X inactivation. Mutations in this gene result in Cornelia de Lange syndrome. Alternative splicing results in multiple transcript variants encoding different isoforms.
