SDS-PAGE analysis of Human Rock-2 proteins, 2µg/lane of Recombinant Human Rock-2 proteins was resolved with SDS-PAGE under reducing conditions, showing bands at 38 kDa

### Background

The protein encoded by this gene is a serine/threonine kinase that regulates cytokinesis, smooth muscle contraction, the formation of actin stress fibers and focal adhesions, and the activation of the c-fos serum response element. This protein, which is an isozyme of ROCK1 is a target for the small GTPase Rho.
