Applications

Recommended usage

FCM

Each lot of this antibody is quality control tested by flow cytometric analysis. **The amount of the reagent is suggested to be used 5 μL of antibody per test (million cells in 100 μL staining volume or per 100 μL of whole blood).** Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use.

Background

CD226 (DNAM-1) is constitutively expressed on native CD8+ cells and on some CD4+ T cells, macrophages and NK cells. CD226 is involved in NK and T cell mediated cytotoxicity against certain tumors. CD155 and CD112 are the ligands for CD226. This antibody (480.1) is reported by the developer to partially block the binding of mouse CD155.
