Recombinant DPP4/CD26 Monoclonal Antibody

catalog number: **AN301964L**

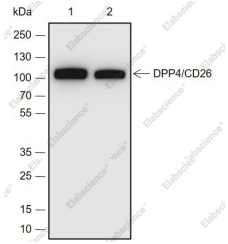

Note: *Centrifuge before opening to ensure complete recovery of vial contents.*

Description

Reactivity	Human;Mouse;Rat
Immunogen	Recombinant human DPP4/CD26 fragment
Host	Rabbit
Isotype	Rabbit IgG
Clone	C121585
Purification	Protein A affinity purification
Conjugation	Unconjugated
Buffer	PBS, 50% glycerol, 0.05% Proclin 300, 0.05% protein protectant.

Applications	Recommended Dilution
WB	1:500-1:1000
IHC	1:200-1:500

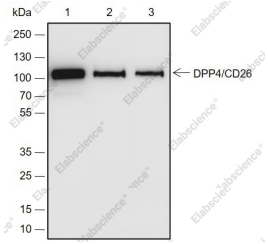

Data

Western Blot with DPP4/CD26 Monoclonal Antibody at dilution of 1:1000. Lane 1: U87-MG, Lane 2: PC-3

Observed-MW:110 kDa

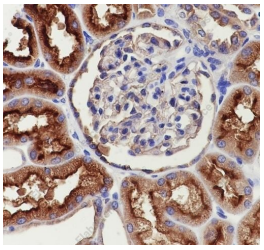

Calculated-MW:110 kDa

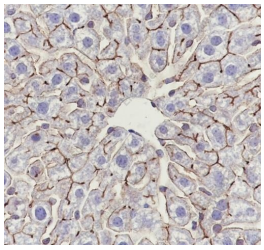

Western Blot with DPP4/CD26 Monoclonal Antibody at dilution of 1:1000. Lane 1: Human liver, Lane 2: Mouse thymus, Lane 3: Rat thymus

Observed-MW:110 kDa

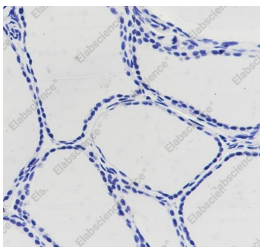

Calculated-MW:110 kDa

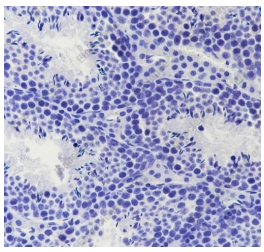

Immunohistochemistry of paraffin-embedded Human kidney using DPP4/CD26 Monoclonal Antibody at dilution of 1:500.

Immunohistochemistry of paraffin-embedded Mouse liver using DPP4/CD26 Monoclonal Antibody at dilution of 1:500.

Immunohistochemistry of paraffin-embedded Human thyroid(Negative tissue) using DPP4/CD26 Monoclonal Antibody at dilution of 1:500.

Immunohistochemistry of paraffin-embedded Mouse testis(Negative tissue) using DPP4/CD26 Monoclonal Antibody at dilution of 1:500.

Preparation & Storage

Storage	Store at -20°C Valid for 12 months. Avoid freeze/thaw cycles.
Shipping	Ice bag

Background

DPP4/CD26 is a type II transmembrane glycoprotein expressed ubiquitously in most tissues and different cell types. The protein has a short cytoplasmic domain, transmembrane domain, a flexible stalk fragment and extracellular fragment. Both the catalytic peptide hydrolase domain and the beta-propeller ligand binding domain are located in the extracellular fragment. DPP4/CD26 is a multifunctional protein that exists in both a membrane bound form as well as an extracellular soluble form. As a peptidase, it removes N-terminal dipeptides sequentially from proteins with a proline or alanine as the penultimate P1 amino acid. DPP4/CD26 has been shown to cleave a wide range of substrates including GLP-1, BNP, etc. In addition to its peptidase activity, DPP4/CD26 interacts with multiple important cell surface ligands, such as adenosine deaminase, fibronectin, and IGF2 receptor to influence processes like T cell activation, cell migration and proliferation.
