Background

Asialoglycoprotein Receptor 1 (ASGPR1) is an endocytic recycling receptor; belongs to the long-form subfamily of the C-type/Ca²⁺-dependent lectin family. ASGPR consists of two noncovalently-linked subunits; ASGPR1 and ASGPR2. ASGPR1 mediates the endocytosis of plasma glycoproteins; recognizes terminal galactose and N-acetylgalactosamine units. When the ligand binds to ASGPR1; results in the complex is internalized and transported to a sorting organelle; then ASGPR1 and ligand can be disassociated; ASGPR1 returns to the cell membrane surface.
