

The professional cell culture empowers a healthier world

50 mg/mL Hygromycin B Solution

Cat. No.: PB180126

Size: 10mL

General Information

Product Form Liquid

Concentration 50 mg/mL

HEPES Negative

Storage 2-8°C, Shading Light

Shipping
Expiration date

Shipping

12 months

Background

Hygromycin B (Hygromycin B) is an aminoglycoside antibiotic commonly used as a resistance screening reagent. It can inhibit protein synthesis by interfering with 70S ribosome translocation and inducing misreading of mRNA templates, thereby killing bacteria, fungi and advanced eukaryotic cells. The hygromycin B phosphotransferase encoded by the hygromycin resistance gene (hyg or hph) derived from E.coli can convert hygromycin B into a phosphorylated product without biological activity, thereby playing a detoxification role. Therefore, hygromycin B is often used to screen and maintain prokaryotic or eukaryotic cells that have successfully transfected hygromycin resistance genes. Hygromycin B is also often used in combination with G418, Zeocin or Blasticidin S for selection of double-resistant positive cell lines due to differences in mode of action. In addition, hygromycin B can also be used as an antiviral agent or mixed into animal feed to play an insect repellent function.

Notes

- This product is for research use only.
- R
- 2. This product is sterilized by 0.1 µm filtration.
- 3. It is necessary to pay attention to the aseptic operation and avoid the pollution.
- 4. It is not recommended to store this product at room temperature for a long time.
- 5. Thaw in 2 -8°C and mix fully before use. Avoid repeated freezing and thawing. It is recommended to aliquot the solution and store at -5~-20°C.
- 6. This product is a concentrated solution and dilute it to the desired concentration before use.
