### Background

Death Domain-Containing Protein CRADD (CRADD) is widely expressed in most tissues; with particularly high expression in the adult heart; testis; liver; skeletal muscle; fetal liver; and kidney. CRADD contains one CARD domain that mediates the interaction with caspase-2; and one death domain involved in the binding of RIP protein. CRADD functions as an apoptotic adaptor molecule specific for caspase-2 and FASL/TNF receptor-interacting protein RIP. CRADD induces cell apoptosis/cell death in numerous tissues. Defects in CRADD will result in mental retardation.
